AI portfolio at ESOC

Applications

■ Ongoing ■ Upcoming ■ Planned

Mission analysis and flight dynamics

Space debris and space weather

Navigation

Human and Robotic Exploration

X-Reality

GT17-682SD Manoeuvre pattern inference for safe operations

GT17-683SD Robust attitude uncertainty estimation for debris removal

T711-801SD Ensemble and surrogate modelling for debris environment long-term simulation

T711-803SD Robust atmosphere error modelling for sustainable operations

T709-809GD Advanced computer vision methods for object detection, classification and segmentation on optical sensors images

T610-701GN Artificial Intelligence for Improved GNSS Precise Products

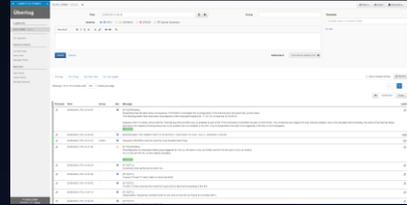

ExPeRT Vision based knowledge extraction using AI

T709-706GD AI aided AR/VR applications and VR aided ML

Motivation

Fragmented & Heterogeneous Systems Landscape

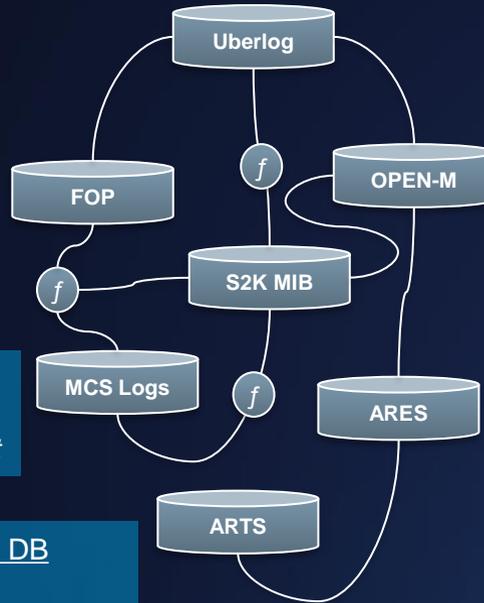

Ops Logs
Free text,
REST API

Procedures
Pdf files
Dedicated parser

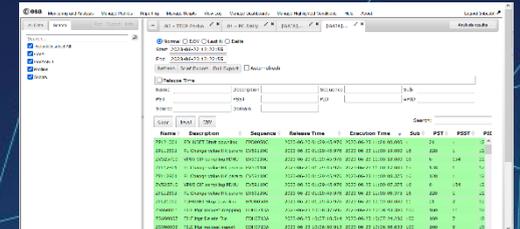

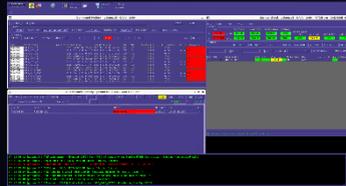

Procedures / System element tree
json files
REST API

MCS Logs
Csv files
Structured text

TM / TC / on-board events
Hadoop DB
REST API

Anomaly DB
csv files
Unstructured text

As a user, I want to know...

What other similar events, touching the sub-systems XYZ occurred within this mission?

What contingency procedure do I have to use for a certain XYZ Out Of Limit or OOL combination?

What was the s/c Latitude/Longitude and space weather condition at time of the OOL triggering?

What procedure and which parameter settings are needed to modify the on-board monitoring of parameter XYZ to threshold value XYZ?

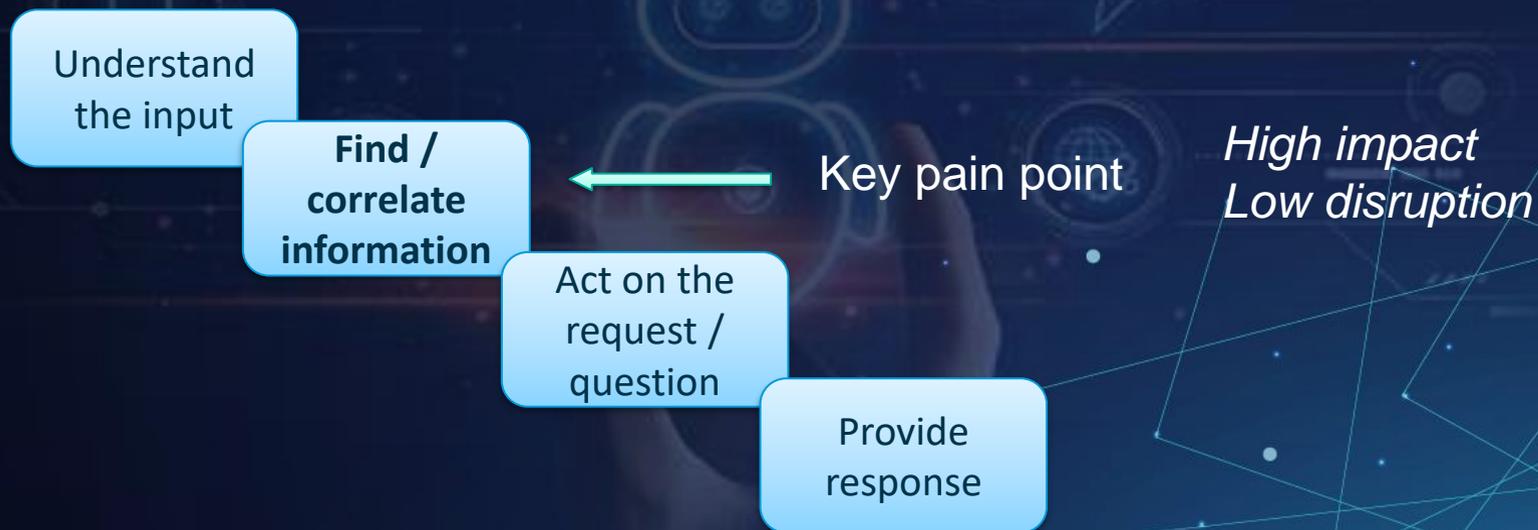

Which are the related information for XYZ command across ARES, Uberlog, ARTS, FOPs and MCS & GS logs?

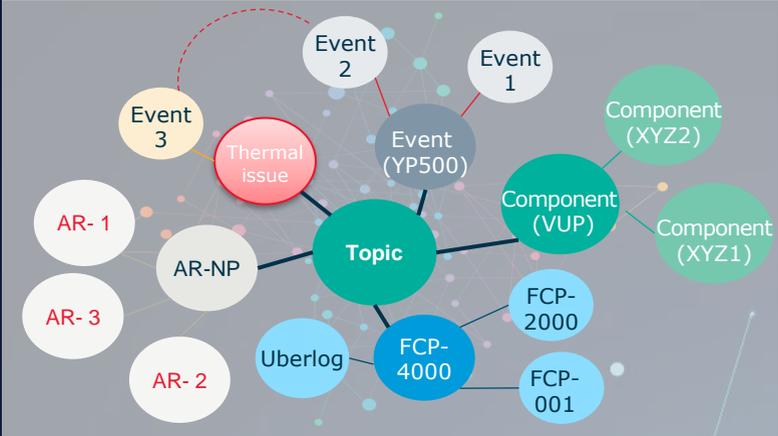

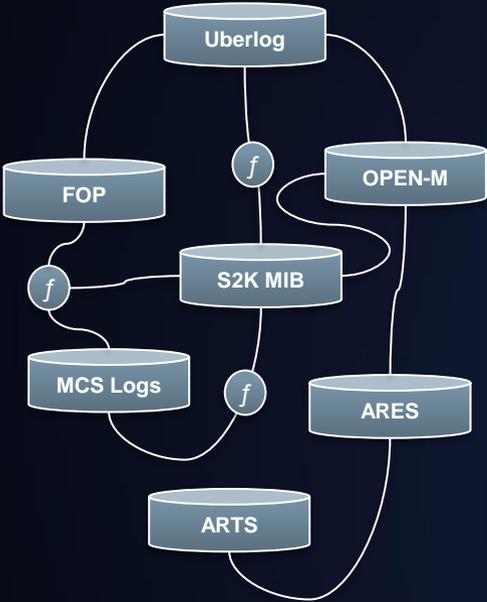

Could you correlate frequency of oscillation parameter XYZ with any other parameter reading?

If you can call the engineer on call and send them the current anomaly and associated information

What is an Operations Companion?

“An AI-powered software agent that is able to interact with a user (with the use of human language) and answer questions or complete tasks relevant to space mission operations”

Structured knowledge base

User Interface & core functionality

Cross-mission, multi key word queries

The screenshot shows the ESA user interface with the following elements:

- Search Bar:** A search input field with a magnifying glass icon and the text "Search...".
- Mission Filter:** A dropdown menu labeled "(All Missions)" with options: "(All Missions)", "Gala", "Cluster", "Sentinel-5P", and "Euclid".
- Section Header:** "Today's On-board Events".
- Navigation Tabs:** "GAIA", "CLUSTER", "SENTINEL-5P", and "EUCLID".
- Spacecraft Events Table:**

DateTime	Mnemonic	Description
2023-06-27 02:45:50.440		
2023-06-27 03:01:04.264		
2023-06-27 03:01:10.012		
2023-06-27 09:19:51.440		
2023-06-27 02:45:50.440		
2023-06-27 03:01:04.264		
2023-06-27 03:01:10.012		
2023-06-27 09:19:51.440		
- Telecommand History Table:**

Execution Time	Name	Description
2023-06-26 23:26:27.375		
2023-06-26 23:26:28.375		
2023-06-26 23:26:29.375		
2023-06-26 23:26:38.000		
2023-06-26 23:26:39.000		
2023-06-26 23:26:40.000		
2023-06-27 00:30:01.375		
2023-06-27 00:30:02.375		
2023-06-27 00:30:03.375		
2023-06-27 00:30:12.000		
- Annotations:** A green arrow points from the search bar to the text "Cross-mission, multi key word queries". A green arrow points from the text "Chronological order" to the "Spacecraft Events" table.

User Interface & core functionality

The screenshot displays the ESA user interface for mission data. At the top, there's a search bar with 'NEI00217 NFS10023 NFS10024' and a dropdown for '(All Missions)'. Below the search bar are navigation tabs: ALL, ARTS, LOGS, PROCEDURES, and ARES. On the left, a 'Time range' filter is set to 'Specify' with dates '2023/06/29'. Below that, 'Component' checkboxes for 'FSS' and 'AOCs' are visible. The main content area shows a 'Telemetry data' graph with multiple colored lines representing different parameters over time. Below the graph is a 'FSS Health Check' section with a 'General Flight Procedure, Activity, Procedure' label. A 'Mentions' section lists various mission-related tags like 'FSS', 'AOCs', 'Gaia FSS', 'Gaia AOCs CSW process', 'FSS', 'AOCs', 'FCP-AC-4803', 'DACASY01', 'DACAFS01', 'NFS20001', 'NFS20005', 'NFS20006', 'NFS20007', and 'NFS20011'. At the bottom, a log viewer shows entries with columns for 'Time', 'Sev', and 'Text'. A search bar labeled 'Similar:' is also present.

Retrieve / Open Procedures

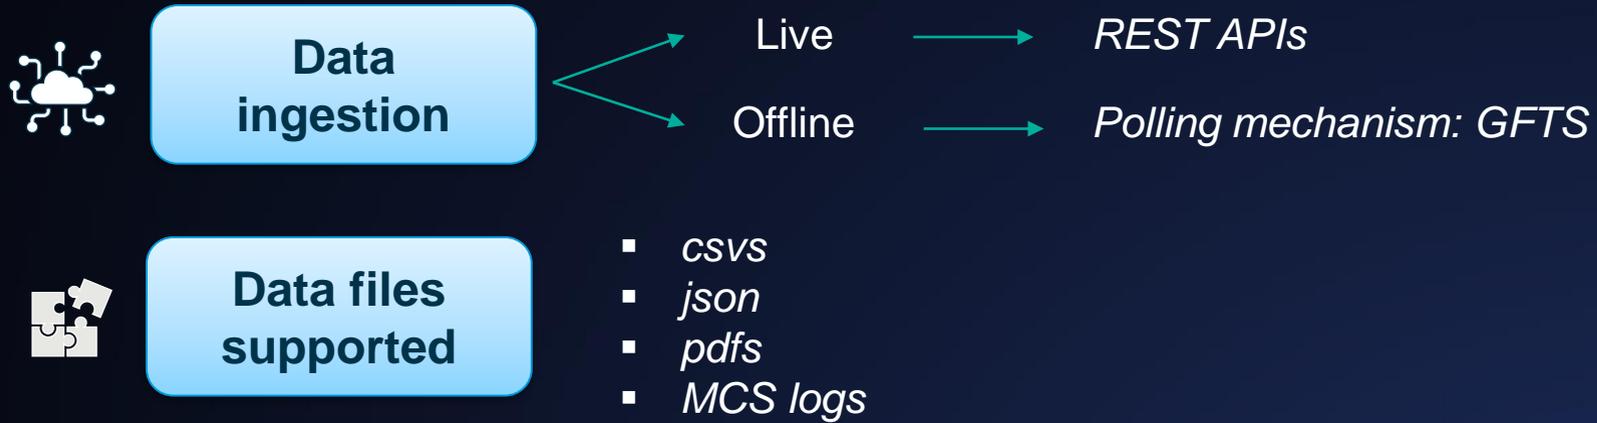

Mentions

Explicit feedback on result relevancy

Filtering

Information split per knowledge source

Getting started

Installation & run

- Docker images
- Setting up local file system

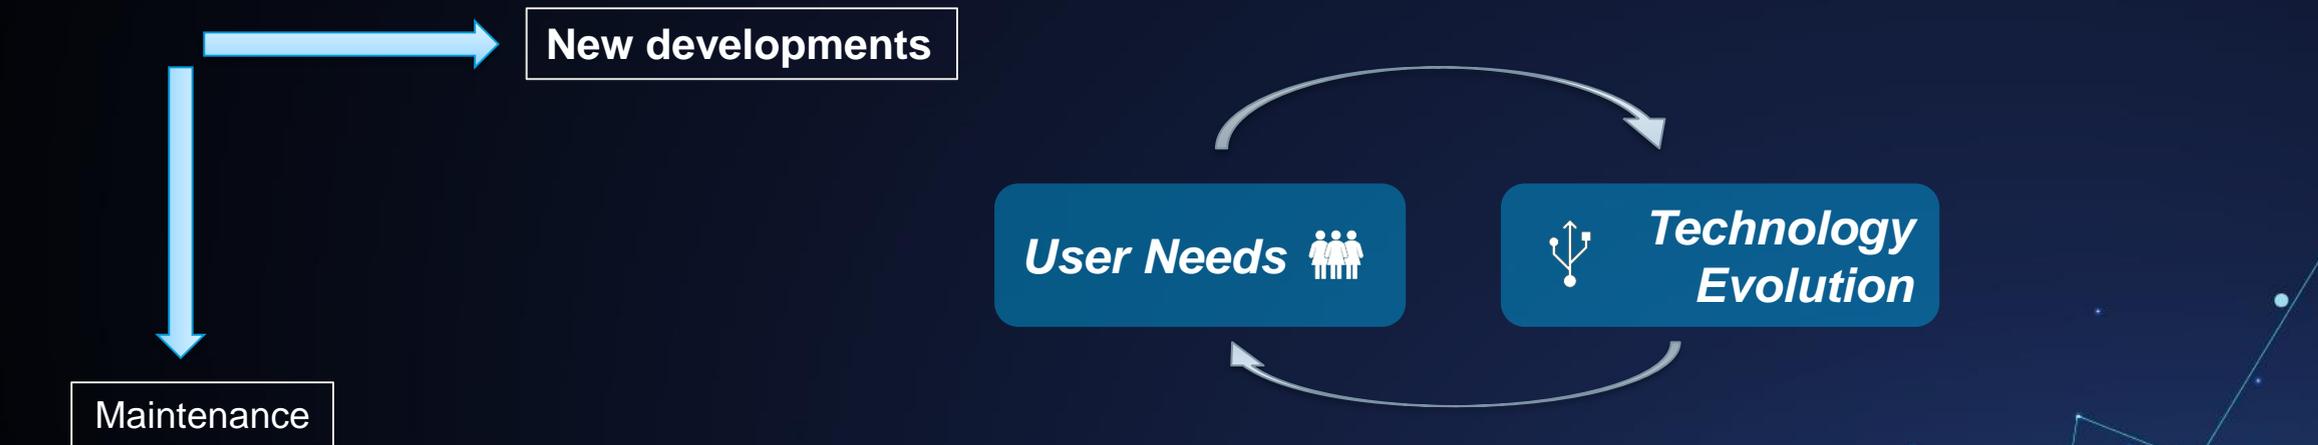

Tailoring for new missions

- Pipeline configuration
- Mission File system
- Permissions

Source code and documentation

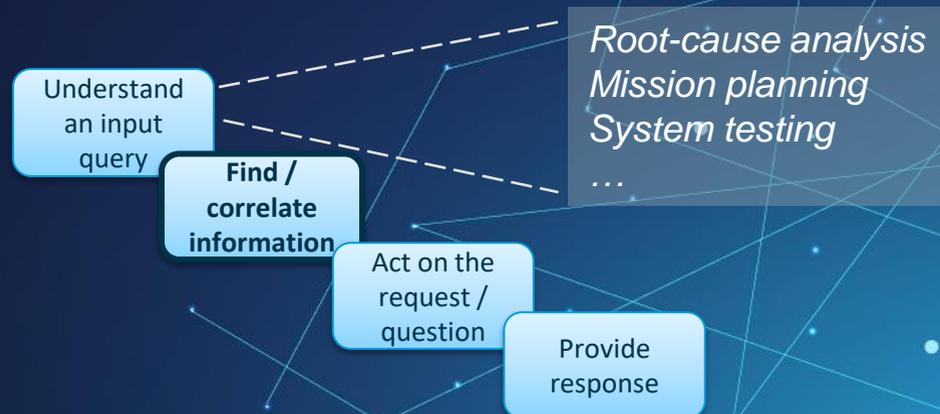

- Will become available at: <https://www.space-codev.org/>
- ECSS: SRS, SDD, SUM, CIG, SVS, ...
- TN with SoTA, Workshop output

Preparing the Next Gen Operations Companion

Next Gen OCAI will support both European industry and ESA missions

Enabler deployment

Data foundation

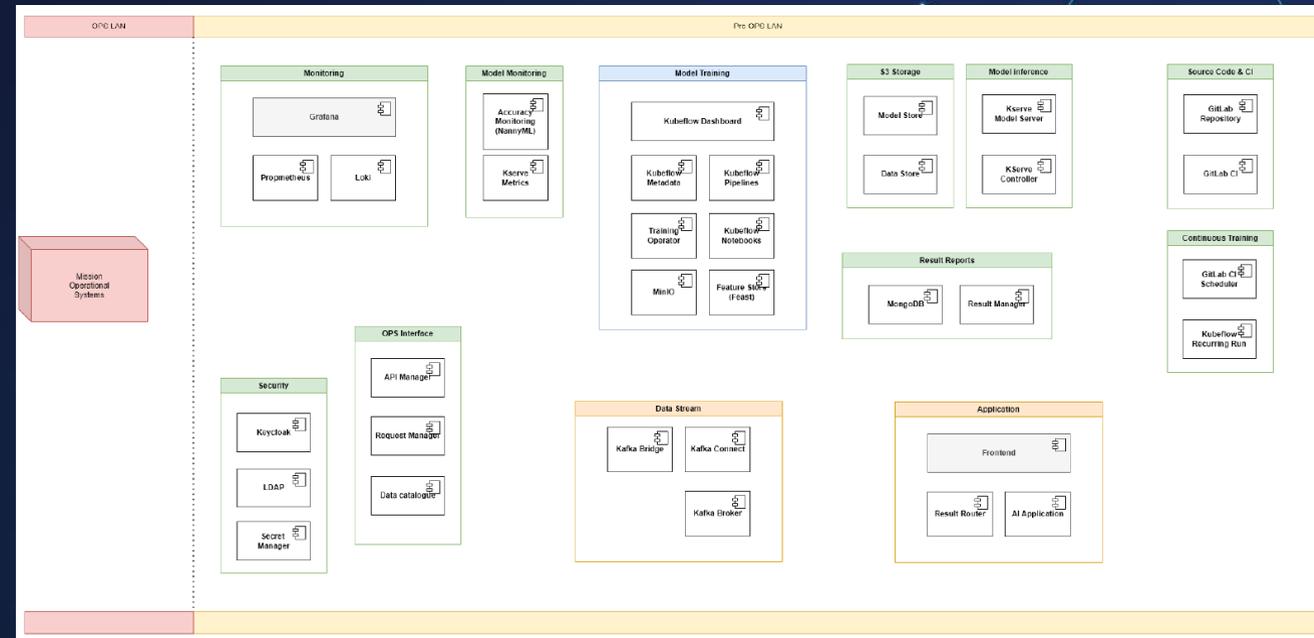

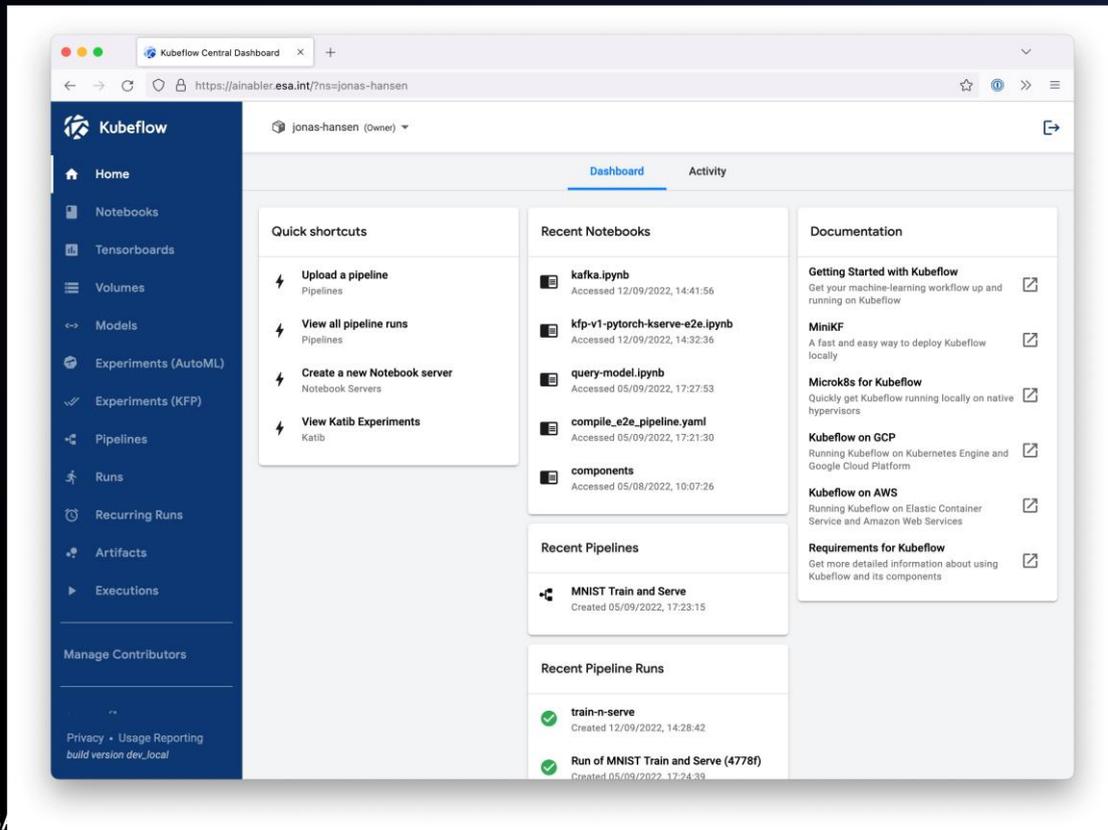

Data pipeline authoring & orchestration	Author data pipelines, schedule data processes
Data and model governance	Controls access, track model activity, Data catalogue, quality and metadata
Data Security	Authorisation, authentication, encryption, data privacy
Infrastructure operations	DevOps and automation, logging, monitoring

Codebase hosted on Space CODEV (<https://www.space-codev.org/>) at (<https://ainabler.space-codev.org/>)

- ESA Community License, Weak Copy Left
- Initial version available now, update due Q3

“The Ainabler platform is at its core a data platform, which enables its users to build, (re-)train, and deploy machine learning (ML) models”

Platform Includes: Model Training, Versioning, Monitoring & Inference, Storage & Results, Data Streaming, Model, Security Monitoring System

Upcoming activities

- Which new user story / feature should OCAI support?
- What data sources are you using on your day-to-day work?

Or:

Discussion with the operators

“One stop shop”

“The mentions are super cool!”

“One other feature that I am using a lot is to browse the procedure content. This is super helpful.”

“OCAI is quite a powerful and useful tool! Quite nice as you can get FOPs, TM data or anomaly DB entries in the same place.”

Thank you COMET community!
